

Area of Geometric Figures

1. Triangle (Semi-perimeter / Heron's formula)

Side a:

Side b:

Side c:

Calculate

Semi-perimeter $s = 6$
Area of Triangle = 6.00

2. Rectangle

Length:

Breadth:

Calculate

Area of Rectangle = 40.00

3. Circle

Radius:

Calculate

Area of Circle = 153.94

Area of Geometric Figures

1. Triangle (Semi-perimeter / Heron's formula)

Side a:

Side b:

Side c:

These sides cannot form a triangle.

2. Rectangle

Length:

Breadth:

Please enter valid positive values.

3. Circle

Radius:

Please enter a valid positive radius.

Multiplication Table Generator

Enter a number:

Using For Loop

Using While Loop

Using Do-While Loop

For Loop

9 x 1 = 9
9 x 2 = 18
9 x 3 = 27
9 x 4 = 36
9 x 5 = 45
9 x 6 = 54
9 x 7 = 63
9 x 8 = 72
9 x 9 = 81
9 x 10 = 90

While Loop

9 x 1 = 9
9 x 2 = 18
9 x 3 = 27
9 x 4 = 36
9 x 5 = 45
9 x 6 = 54
9 x 7 = 63
9 x 8 = 72
9 x 9 = 81
9 x 10 = 90

Do-While Loop

9 x 1 = 9
9 x 2 = 18
9 x 3 = 27
9 x 4 = 36
9 x 5 = 45
9 x 6 = 54
9 x 7 = 63
9 x 8 = 72
9 x 9 = 81
9 x 10 = 90

String Operations

1. Reverse String

String:

Using String Methods

Without String Methods

Length: 10

Reversed (without methods): tpircSavaJ

2. Replace Characters

String:

Replace:

With:

Using String Methods

Without String Methods

Replaced (without methods): hell0 w0rld

3. Check Palindrome

String:

Using String Methods

Without String Methods

'madam' is a Palindrome (without methods)

String Operations

1. Reverse String

String:

Using String Methods

Without String Methods

Length: 10

Reversed (using methods): tpircSavaJ

2. Replace Characters

String:

Replace:

With:

Using String Methods

Without String Methods

Replaced (using methods): hell0 w0rld

3. Check Palindrome

String:

Using String Methods

Without String Methods

'hello' is NOT a Palindrome (using methods)

String Comparison Methods

string1:

string2:

Strict Equality (===)

Length Comparison

localeCompare()

Compare All

Strict Equality (===): 'apple' and 'banana' are NOT equal
Length: string1 = 5, string2 = 6 -> string2 is longer
localeCompare() returned -1 -> 'apple' comes BEFORE 'banana' alphabetically

String Comparison Methods

string1:

string2:

Strict Equality (===)

Length Comparison

localeCompare()

Compare All

Strict Equality (===): 'Hello' and 'Hello' are EQUAL
Length: string1 = 5, string2 = 5 -> both have the same length
localeCompare() returned 0 -> both strings are the same alphabetically

String Comparison Methods

string1:

string2:

Strict Equality (===)

Length Comparison

localeCompare()

Compare All

Strict Equality (===): 'Hello' and 'hello' are NOT equal
Length: string1 = 5, string2 = 5 -> both have the same length
localeCompare() returned 1 -> 'Hello' comes AFTER 'hello' alphabetically

Countdown Timer

End date and time:

Format: any date string understood by `Date.parse()`, e.g. "Dec 31, 2026 23:59:59" or "2026-12-31T23:59:59"

Start

Stop

2d 5h 30m 17s

Array Operations

Create Array

Array length:

Elements (comma separated):

Create Array

Array created: [10, 20, 30, 40, 50]

1. Remove a Specific Element

Element to remove:

Using Array Methods

Without Array Methods

Original: [10, 20, 30, 40, 50]
After removing '30' (using methods): [10, 20, 40, 50]

2. Check if Array Contains a Value

Value to search:

Using Array Methods

Without Array Methods

'40' IS present in the array (using includes())

3. Empty the Array

Using Array Methods

Without Array Methods

Before: [10, 20, 30, 40, 50]
After emptying (using splice()): [], length = 0

Array Operations

Create Array

Array length:

Elements (comma separated):

Create Array

Array created: [10, 20, 30, 40, 50]

1. Remove a Specific Element

Element to remove:

Using Array Methods

Without Array Methods

Original: [10, 20, 30, 40, 50]

After removing '10' (without methods): [20, 30, 40, 50]

2. Check if Array Contains a Value

Value to search:

Using Array Methods

Without Array Methods

'99' is NOT present in the array (using for loop)

3. Empty the Array

Using Array Methods

Without Array Methods

Before: [10, 20, 30, 40, 50]

After emptying (setting length = 0): [], length = 0

Array Operations

Create Array

Array length:

Elements (comma separated):

Create Array

Please enter exactly 4 elements (you entered 2).

1. Remove a Specific Element

Element to remove:

Using Array Methods

Without Array Methods

2. Check if Array Contains a Value

Value to search:

Using Array Methods

Without Array Methods

3. Empty the Array

Using Array Methods

Without Array Methods

Arrays and Array Objects

Step 1 and 2: Create Array of Given Size

Size of array:

Step 3: Append an Object to the Array

Name: Age:

Step 4: Check with isArray()

Other Array Object Methods

Object appended using push().
Array: [10,20,30,{"name":"Rahul","age":21}]
Length = 4

Arrays and Array Objects

Step 1 and 2: Create Array of Given Size

Size of array:

Step 3: Append an Object to the Array

Name: Age:

Step 4: Check with isArray()

Other Array Object Methods

```
Array.isArray(myArray) = true  
Array.isArray(appended object {"name":"Rahul","age":21}) = false  
typeof appended object = object
```

Arrays and Array Objects

Step 1 and 2: Create Array of Given Size

Size of array:

Step 3: Append an Object to the Array

Name: Age:

Step 4: Check with isArray()

Other Array Object Methods

```
pop() removed: {"name":"Rahul","age":21}
Array: [{"name":"Priya","age":20},10,20,30]
Length = 4
```

Arrays and Array Objects

Step 1 and 2: Create Array of Given Size

Size of array:

Create Array

Step 3: Append an Object to the Array

Name:

Age:

Append Object (push)

Add Object at Start (unshift)

Step 4: Check with isArray()

Check isArray()

Other Array Object Methods

pop()

shift()

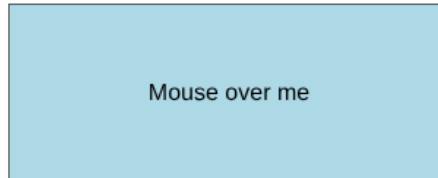

```
shift() removed: {"name":"Priya","age":20}
Array: [10,20,30]
Length = 3
```
